

## ***EKU FREN VE DÖKÜM SAN. A.Ş***

### ***HSE (Health, Safety, Environment & Energy) Integrated Management System Policy***

EKU FREN VE DÖKÜM SAN A.Ş. has adopted the principle of focusing on Human, Environment & Energy topics.

We are committed to:

Raise awareness of our internal employees and external providers on the protection of Human, Environment and Energy through trainings and presentations,

Comply with the applicable regulations as well as the environmental, occupational health and safety and energy requirements of the customers and subscribed organizations,

Prevent work accidents and occupational diseases and ensure consultation and participation of the employees and employee representatives in the process of improving the occupational health and safety management system continuously

Prevent energy losses, reduce unrestrainable energy loss, using products and procuring services with high energy efficiency and continuously improving the management system performance by providing the resources necessary for these,

Prevent environmental impacts at source, developing appropriate methods for mitigating unrestrainable impacts, ensuring recycling and disposal and continuously improving the management system performance

Support activities on the efficient use, recycling and re-using the resources considering the scale, objectives, context and environmental impact of our company regarding the environmental activities and minimizing the consumption of natural resources, conducting activities in line with the goals of sustainable development,

Prevent factors that affect Environmental, Occupational Health and Safety and Energy performance at design and procurement stage and reducing the unrestrainable ones to acceptable levels,

Control, review, ensuring traceability of the Environmental, Occupational Health and Safety and Energy management system and setting and inspecting its objectives in accordance with the principle of continuous improvement
